

**Candidate Conservation Agreement with Assurances for
Texas Hornshell Mussel (*Popenaias popeii*) and Other Covered Species**

**New Mexico Commissioner of Public Lands and U.S. Fish and Wildlife
Service**

May 4, 2017

This Candidate Conservation Agreement with Assurances (CCAA or Agreement), effective and binding on the date of the last signature below, is between the New Mexico Commissioner of Public Lands (Commissioner) and the U.S. Fish and Wildlife Service (Service) (referred to herein as “Party” or “Parties”). This CCAA is an umbrella agreement under which lessees or grantees of state trust lands¹ (collectively herein referred to as “Lessees,” “Participants,” or “Participating Lessees”) can participate in and receive the benefits of the CCAA by signing a Certificate of Inclusion, subject to approval by the Commissioner and concurrence by the Service.

Administrators of this Agreement are:

Land Office: Commissioner of Public Lands
New Mexico State Land Office
310 Old Santa Fe Trail
PO Box 1148
Santa Fe, NM 87504-1148
505-827-5760

Service: Debra Hill
New Mexico Energy Streamlining Program Coordinator
Southwest Regional Office
U.S. Fish and Wildlife Service
2105 Osuna NE
Albuquerque, NM 87113

Tracking Number:

1. Authority

Sections 2, 7, and 10 of the Endangered Species Act ("Act") of 1973, as amended, allow the U.S. Fish and Wildlife Service to enter into this CCAA. Section 2 of the Act states that encouraging

¹ A lessee or grantee of state trust lands is eligible to participate in this CCAA under the definition of Property Owner as “a person with a fee simple, leasehold, or other property interest (including owners of water rights or other natural resources), or any other entity that may have a property interest, sufficient to carry out the proposed management activities, subject to applicable State law, on non-Federal land.” 50 C.F.R. §17.3.

interested parties, through federal financial assistance and a system of incentives, to develop and maintain conservation programs is a key to safeguarding the nation's heritage in fish, wildlife, and plants. Section 7(a)(1) of the Act requires the Service to review programs that it administers and to utilize such programs in furtherance of the purposes of the Act. By entering into this CCAA, the Service is utilizing its Candidate Conservation Programs to further the conservation of the nation's fish and wildlife. Lastly, section 10(a)(1)(A) of the Act authorizes the issuance of permits to "enhance the survival" of a listed species.

Article XIII, Section 2 of the New Mexico Constitution grants the Commissioner authority over the direction, control, care and disposition of all public lands.

2. Covered Species

This CCAA covers the Texas hornshell mussel (*Popenaias popeii*), Rio Grande river cooter (*Pseudemys gorguzi*), gray rehorse (*Moxostoma congestum*), blue sucker (*Cypleptus elongatus*), and Pecos springsnail (*Pyrgulopsis pecosensis*) (Covered Species).

3. Purpose

The purpose of this CCAA is for the Service to join with the Commissioner and Participating Lessees in implementing habitat protection or improvement projects (Habitat Projects) and land management or water use practices (Conservation Measures) aimed at protecting or restoring habitat for the Covered Species, in a manner that is consistent with the Service's Policy on Candidate Conservation Agreements with Assurances (81 FR 95164) and applicable regulations. The CCAA provides incentives to the Commissioner and its Lessees to implement Conservation Measures and Habitat Projects by providing them with regulatory certainty concerning land or water use restrictions that might otherwise apply should the Covered Species be listed under the ESA. The overall condition of state trust lands will also be maintained or improved by the implementation of the CCAA.

Through this CCAA, the Commissioner will protect the Covered Species by encouraging and implementing landscape- and watershed-based conservation activities that also benefit the overall ecosystem. The specific conservation goals of this CCAA are to protect the existing populations of the Covered Species in the Black River and to support efforts to reestablish populations of the Covered Species in the Delaware River. The broader conservation goals of the CCAA are to protect and restore habitat for the benefit of multiple species within the CCAA boundary to prevent the need for future ESA listings.

Participating Lessees will contribute to these goals through implementation of Conservation Measures as agreed upon in their individual Certificates of Inclusion (CIs). The Conservation Measures developed for this CCAA are generally focused on refraining from or mitigating the impacts of activities that could negatively impact the Covered Species, such as avoiding new surface

disturbances in or near life history sites, reducing or curtailing water use when river flows are low, or managing sediment.

The Commissioner will implement Habitat Projects on state trust land using qualified contractors selected through an open bidding process. Habitat Projects are projects that are intended to protect or improve habitat for the Covered Species, such as stabilizing or revegetating streambanks and riparian areas, purchasing or leasing water rights to ensure adequate flows are maintained for life history sites, or constructing sediment traps.

The Commissioner's enrollment of all state trust land within the CCAA boundary will have significant long term benefits for the Covered Species through increased participation by current and future Lessees, who otherwise could be excluded in the event of a listing. Through this Agreement, the Commissioner can encourage and support existing and future Lessees' efforts to maintain and improve habitat for the Covered Species so that revenue-generating activities can continue for the benefit of the Lessees and state trust beneficiaries.

The Commissioner has a constitutional mandate to generate revenue for schools and other beneficiaries of the state trust while ensuring that state trust lands are taken care of now and in perpetuity. Nothing in this agreement may, or is intended to, modify or limit the authority of the Commissioner to act in the best interest of the trust.

4. Relationship to other Agreements

The structure and implementation of this CCAA will be closely coordinated and integrated with the Center of Excellence (CEHMM) Candidate Conservation Agreement for federal lands and Candidate Conservation Agreement with Assurances for private lands (referred to together as "CEHMM CCA/A") for the same Covered Species through a memorandum of agreement (MOA) between the Commissioner and CEHMM. The primary goals of the cooperative relationship described in the MOA are to:

- limit up-front costs and provide consistency for participants that want to enroll in the Land Office CCAA and the CEHMM CCA/A;
- coordinate and collaborate on habitat protection and restoration projects for the Covered Species; and
- foster a landscape- and watershed-based approach to habitat restoration projects that draws on local knowledge and the best available science.

The MOA may be amended from time to time as agreed upon by the Commissioner and CEHMM to improve implementation of the candidate conservation agreements. Should the MOA between the Commissioner and CEHMM be terminated prior to the expiration of this CCAA, the Commissioner shall seek to enter into a new MOA with another conservation entity to effectuate the purposes of this CCAA. Although the intent is to implement this CCAA in collaboration with CEHMM, this CCAA can be implemented independently of the CEHMM CCA/A and shall remain

in effect unless terminated pursuant to Section 26 (Permit Suspension or Revocation) or transferred pursuant to Section 29 (Succession and Transfer).

5. Responsibilities of the Parties

Commissioner

The Commissioner shall implement and administer the CCAA as follows:

- (1) Provide staff and resources necessary to carry out the responsibilities enumerated herein.
- (2) Implement Habitat Projects on state trust lands to benefit the Covered Species.
- (3) Encourage current and future state trust land Lessees within the CCAA project boundary to participate in the CCAA through CIs:
 - a. Upon approval of this agreement, contact existing Lessees of state trust lands within the CCAA boundary to inform them about the CCAA and encourage them to voluntarily participate through CIs.
 - b. Inform future Lessees about the CCAA at the time their lease or other grant is issued and encourage them to voluntarily participate through CIs.
- (4) Assist Lessees with the development of their CIs.
- (5) Work with Lessees to ensure CIs incorporate applicable conservation strategies consistent with this CCAA.
- (6) Review and sign CIs.
- (7) At least 30 days prior to enrolling Lessees under this CCAA, provide the completed CI to the Service for concurrence and signature.
- (8) Conduct compliance monitoring activities as specified in Section 18 of this CCAA.
- (9) Work with Lessees to ensure appropriate implementation of the provisions of CIs.
- (10) Submit an annual report to the Service that documents activities implemented under the CCAA, their effects, and effects of activities undertaken in prior years that require multi-year monitoring, as described in Section 17.
- (11) Coordinate as described in Section 4 with the implementation of the CEHMM CCA/A.

Service

The Service shall:

- (1) Issue an Enhancement of Survival Permit (Permit) to the Commissioner, under section 10(a)(1)(A) of the Endangered Species Act (ESA), in accordance with 50 CFR 17.22 and 17.32 (d), with a term of 30 years, that will provide the Commissioner with authorization for incidental take of the Covered Species and provide regulatory assurances should any of the Covered Species be listed under the ESA in the future. The Permit will also authorize incidental take of Texas hornshell mussel and other Covered Species resulting from otherwise lawful activities on the lands enrolled under CIs approved by the Commissioner and the Service. Such activities will be specified in each CI, as applicable, and may include, but are not limited to oil, gas and

mineral production and associated activities; pumping water for sale, gift, or trade; crop cultivation and harvesting; and livestock grazing.

- (2) Within 30 days of receipt of a completed CI, notify the Commissioner as to whether the Service concurs that the CI is adequate to enroll the subject lands. If the Service concurs with the CI, it will sign it and return it to the Commissioner. If the Service does not concur, it will contact the Commissioner to agree on measures that would create an adequate CI for Service signature. If after 30 days the Service has not responded, concurrence is automatically conveyed.
- (3) Review within 60 days those monitoring and other reports submitted by the Commissioner to the Service for compliance with the terms of the CCAA and the CIs, and notify the Commissioner of any possible amendments to the CCAA or CIs that may warrant consideration.

6. Responsibilities of Participating Lessees

Lessees that wish to receive assurances under the CCAA shall:

- (1) Enroll in the CCAA by preparing a CI with the assistance of the Commissioner, to be submitted to the Service for concurrence. An approved CI will include Conservation Measures that Lessees agree to implement in order to receive protection under the Permit associated with the CCAA if any of the Covered Species is listed as threatened or endangered under the federal Endangered Species Act.
- (2) Implement the Conservation Measures as agreed upon in the CI.
- (3) Notify the Commissioner at least 15 days prior to a new surface disturbance, if applicable.
- (4) Pay enrollment fees and new surface disturbance fees, if any, as agreed upon in the CI.
- (5) Notify the Commissioner in a timely manner of any problems or issues that arise in carrying out the terms of the CI.

7. Enrolled Lands

This CCAA pertains to the approximately 79,231 acres of surface/subsurface and 8,430 subsurface state trust land within the CCAA boundary in New Mexico (Appendix A). These lands will remain in enrolled status for the duration of this CCAA, as long as the Land Office is performing its obligations under this Agreement. Participation in this CCAA through CIs is open to Lessees within the boundary of the CCAA.

8. Description of Existing Conditions

The description of existing conditions related to the Covered Species prepared for the CEHMM CCA/A is adopted herein, as follows:

Species Descriptions

Texas Hornshell Mussel

The Texas hornshell (*Popenaias popeii*) is a freshwater mussel that historically occurred in the Pecos-Rio Grande drainage. The shell is elongate and subtrapezoidal – meaning four distinct sides with two sides that are parallel with the length greater than the width. The length-to-width ratio is 1:8. Shells are compressed and wider than tall. Beaks are low but sharp, hinge-tooth compressed, and beak cavity is very shallow. The external color varies from dark brown to olive green. The nacre is white, although some specimens show purple on the nacre. The shell length can reach 108 mm (4.25+ inches) (Howells 2001). Internal soft anatomy consists of a large visceral mass, two pairs of gills used for respiration and glochidial incubation, incurrent and excurrent siphons for water exchange, and a muscular foot for movement.

Historically, the species occurred throughout much of the Pecos and Rio Grande drainages (Carman 2007, Howells 2001). The species was once found from North Spring River, Roswell, Chaves County, NM south in the Pecos, Black, and Delaware rivers to the confluence of the Rio Grande and Pecos rivers and further to the Gulf of Mexico. Recently, there has been the discovery of individuals in the Rio Grande upriver from the confluence of the Pecos River (Howells 1994; Karateyva et al. 2015). Texas hornshell is currently known from numerous rivers that empty into the Rio Grande from the Mexican states of Coahuila, Nuevo Leon, and Tamaulipas (Carman 2007, The University of Texas at El Paso Museum Specimens). Much of the habitat within this range is no longer suitable for the Texas hornshell. Populations in the lower Rio Grande and associated tributaries are disjunct and little is known about the size of these populations. Although extant populations likely exist in Mexico, sociopolitical issues have hindered investigation into the demographics of these populations.

Currently the species is known from four widely separated locations. The first location is in the Black River where the species is confined to a 14 km (8.7 mi) stretch from Black River Village downstream to the CID Dam in Eddy County, New Mexico (Carman 2007). This represents less than 12 percent of its historic range in New Mexico (Lang 2001). The second locality is from the Lower Rio Grande in Texas, approximately from the confluence of the Pecos River and Rio Grande possibly down to Brownsville, Cameron County (Lang 2001). Howells (2001) also reported a few shells upriver from the confluence of the Pecos and Rio Grande and downstream from the eastern boundary of Big Bend National Park. Texas hornshell is also extant in the Devil's River in Texas, upstream from Amistad Reservoir (Inoue et al. 2015). Empty Texas hornshell valves (shells) are sometimes found in locations downstream from known Occupied Habitat. Their occurrence in these downstream areas may be due to displacement from upstream populations by flooding or from river flow changes, such as water withdrawal and impoundments. Mussel shells are known to persist in the environment for long periods of time and the presence of valves should not be considered evidence of an extant population. NMDGF moved approximately 20-30 adult Texas hornshells from the Black River to the Delaware River, New Mexico, in May of 2013

(BLM 2013) and 63 individuals in the summer of 2015. NMDGF, in conjunction with the BLM, marked the individuals with tags and have been monitoring the population (BLM 2013).

The Black River population occupies undercut riverbanks, crevices, ledges, and travertine shelves, and can be found under large boulders. Preferred substrate includes small-grained materials such as clay, silt, or sand that provides areas for the mussels to anchor. They will expose only the posterior portion of the shell in areas with a soft substrate of sand or mud, allowing the animal to siphon, with the rest of their body being covered with substrate. In rocky sites, it will be found in cracks and crevices where fine sediment deposits.

Filter-feeding mussels require clean, flowing water, making mussels good indicators of environmental change and aquatic ecosystem health. As such, both point source and non-point source pollution of surface waters can affect mussel survival. Texas hornshell is particularly sensitive to salinity, with death occurring around 7.0ppt (Lang 2001). Salinity is stable around 0.9 ppt at the Black River sites and increases to 2.8 ppt downstream of the CID Dam. The lower Pecos River downstream of the Black River confluence ranges from 6.0 – 7.0 ppt in salinity. Mean salinity of the Delaware River from 1996-2000 was 1.8 ppt (Carman 2007). New Mexico's lower Pecos River experiences high salinity due to brine intrusions near Malaga, New Mexico. Approximately 450,000 tons of salt is estimated to enter the lower Pecos at two sites every year (Miyamoto et al. 2008). Due to the extreme salinity changes and lack of passage, it is very unlikely that populations will establish outside of the already occupied reach in the Black River.

The life cycle of all freshwater mussels includes a larval stage, or glochidia. Each glochidium must attach to an external host which is most commonly a fish, although some species use salamanders. These glochidia attach to fish hosts for up to six weeks, transform into juvenile mussels, and then fall off the fish. Host fish aid in dispersal of genetics and allow for each individual to complete its life cycle. Restricting movement of host fish via dams and other barriers would restrict movement of the Texas hornshell. Without sufficient populations of host fish, a mussel population will slowly decline until it eventually cannot recover.

Several fish species have been identified as important hosts for Texas hornshell, including gray redhorse (*Moxostoma congestum*), river carpsucker (*Carpionodes carpio*), blue sucker (*Cycleptus elongatus*), red shiner (*Cyprinella lutrensis*), and longear sunfish (*Lepomis megalotis*). Several of these species have declined in both abundance and distribution, most likely due to the same changes in habitat that have led to range-wide declines in Texas hornshell. Conservation of host fish, specifically those mentioned above, will be critical to the success of this agreement.

Rio Grande River Cooter

The Rio Grande river cooter (*Pseudemys gorzugi*), also known as the Western river cooter in New Mexico, is a large turtle with yellow-green stripes on the head and neck, and red, yellow, and black markings on the legs. Females average 195.3 mm and males average 152.3 mm in carapace length (Degenhardt et al. 2005). This species is rather sedentary, with maximum movements of only 300 meters (Degenhardt et al. 2005). The Rio Grande river cooter occurs in large, deep pools of rivers, and is found in the Black, Delaware, and Pecos rivers in New Mexico and Texas (Degenhardt et al. 2005).

The Rio Grande river cooter is currently listed as “threatened” by the NMDGF, and the Center of Biological Diversity petitioned the FWS in 2012 to consider this species for protection under the ESA (NMDGF 2014). Threats to the species include recreation (such as hunting and fishing), predation, wildfires, and runoff pollution (NMDGF 2014).

Gray Redhorse

The gray redhorse (*Moxostoma congestum*) is a host fish for the Texas hornshell glochidia (Levine et al. 2012). Historically, the gray redhorse ranged from central and west Texas and northwestern Mexico to the Pecos River and Rio Grande in southern New Mexico and Texas (NMDGF 2014). In New Mexico, the gray redhorse historically occupied the Rio Grande downstream of Socorro and the Pecos and Black rivers from Roswell south to the Texas border (NMDGF 2014). Due to golden algae (*Pyrnmesium parvum*) blooms in New Mexico, the gray redhorse currently only exists in the lower Black River from Blue Springs to the Pecos River confluence (NMDGF 2014). In conjunction with the BLM, the gray redhorse has been reintroduced into the Delaware River by NMDGF. NMDGF and BLM field surveys conducted in 2016 on the Delaware River revealed initial successful reproduction by the species (BLM 2013; Tim Frey BLM pers. com.). Further augmentation of the gray redhorse may continue when deemed essential to the species persistence.

The gray redhorse occupies clear streams, and is associated with deep (>0.8 m) low current velocity (<0.1 ms⁻¹) pools (Bean et al. 2009).

The gray redhorse was listed as “threatened” by the NMDGF in 1976 and then as “endangered” in 2008. Threats to the species include range fragmentation, contamination of surface waters, modified flow regimes, and golden algae blooms (NMDGF 2014). Depletion of surface waters is a major cause of decline of the gray redhorse (Bean et al. 2009; Hoagstrom 2001).

Blue Sucker

The blue sucker (*Cyprinostomus elongatus*) is a host fish for Texas hornshell glochidia (Levine et al. 2012). Historically, the blue sucker occupied the Pecos River north of Carlsbad downstream to the New Mexico/Texas border and the lower Black River (NMDGF 2014). The blue sucker has declined throughout much of its native range. It has further declined since 2002

in the Pecos River, in part due to the effects from golden algae blooms, from Brantley Reservoir downstream (NMDGF 2014). It is likely extirpated from the Pecos River and the status of the population in the Black River is unknown (NMDGF 2014).

The blue sucker was listed as “endangered” by the NMDGF in 1976 (NMDGF 2014). Threats to the species include range fragmentation by dams, water contamination, golden algae blooms, and water quality changes in the Black River drainage (NMDGF 2014).

Pecos Springsnail

Springsnails are tiny mollusks with conical shaped shells that range in color from gray to light brown. The Pecos springsnail (*Pyrgulopsis pecosensis*), which has been listed as a state “threatened” species by the NMDGF since 1983, historically occupied only Blue Springs and Castle Springs associated with the Black River in Eddy County, New Mexico. The species has since been extirpated from Castle Springs (NMDGF 2014).

Threats to the Pecos springsnail include water diversion, drought, underground pumping of water, pollution from oil and gas exploration and production, and poor range management (NMDGF 1996).

Threats

There are multiple activities in the area that may result in threats to one or all of the Covered Species. Threats to the species include water removal, disruption of flow by physical barriers, contamination, sedimentation through erosion, and removal of riparian vegetation. All Participants covered by this CCAA may not contribute to some or all of these threats, but all will follow Conservation Measures or provide in-kind services for conservation to reduce or eliminate these threats. Below is a detailed description of impacts that these threats may have on the Covered Species.

Loss, Destruction, Modification, or Fragmentation of Habitat

Water Quality and Loss of Water Resources

Degradation of water quality is a primary threat to the Covered Species and other desert riparian species. Poor water quality negatively impacts species survival and affects the function of the local ecosystem. Low water levels and contaminants (Carman 2007) exacerbate poor water quality conditions, resulting in potential damage to habitat of the Covered Species. Recent pumping of water from Black River, extreme drought events, along with other increased water withdrawals for commercial and other purposes have caused the amount of surface flow in the watershed to decline significantly (Carman 2007). Additional reduction in flow could raise the water temperature, cause pools to stagnate, and cease surface flow altogether.

Low-water crossings on both the Black and Delaware rivers are utilized frequently by both passenger vehicles and commercial trucks associated with construction activities including, but not limited to, oil and gas development. Vehicles utilizing low-water crossings could discharge pollutants (liquids or solids) (BLM 2016) in violation of the Clean Water Act or the Oil Pollution Act that could impact the Covered Species. Inadvertent transport of contaminants and contaminated soils by otherwise legal traffic usage may also occur. The topography and steep slopes of these low-water crossings could allow spilled contaminants and contaminated soils to directly enter into the surface water of the river and negatively impact the species (Boyer 1986; Green and Trett 1989; Jercinovic 1982, 1984).

Golden algae is a warm water alga that occasionally erupts (blooms) in the Pecos River (Maning and La Claire 2010). A change to the water quality has been shown to increase chances of golden algae blooms (James and De La Cruz 1989). In contrast, high instream flows can terminate or suppress golden algae blooms (Harris 2010). These blooms originate in the Pecos River and have been found at the mouth of the Black River. By depleting the river of oxygen, blooms of golden algae and associated toxins would likely result in irreparable harm to the Covered Species. Water temperatures are lower in the Delaware River compared to other sites in the Pecos River, making it less susceptible to golden algae blooms. Maintaining adequate water flow in the Black River will help reduce the potential for golden algae blooms that can impact the Covered Species.

Runoff and Erosion

Historical land use activities, such as construction and livestock overgrazing, have decreased water absorption potential of topsoil, thus increasing erosion and runoff. Erosion and runoff are sources of fine sediment that can accumulate in a watershed, degrade or eliminate habitat for the Covered Species, and smother individual Texas hornshells. Native grasses have decreased along the riverbanks, and the vegetative component has shifted to woody plants (Carman 2007). In many cases, these activities have caused changes in stream morphology, changes in substrate composition, increases in drainage entrenchment and bank collapse, and increases in pulse discharge into the river, providing better habitat for exotic competitors (i.e., *Corbicula fluminea*) (NMDGF 2008).

Overutilization for Commercial, Recreational, Scientific, or Educational Purposes

Fishermen rarely target sucker species; however, both gray redhorse and blue sucker may unintentionally be collected by fishermen targeting catfish and other sport fish. Although prohibited to collect in New Mexico, the Rio Grande river cooter may be the target of illegal collection. Collection of Texas hornshell, blue sucker, gray redhorse, and Rio Grande river cooter is currently regulated by NMDGF.

Climate Change

Climate change projects indicate that warming in the Southwest is expected to be greatest in the summer (IPCC 2013, pp.11–12), and annual mean precipitation is very likely to decrease in the Southwest (IPCC 2013, pp. 11–12; Ray et al. 2008, p. 1). In Texas, the number of extreme hot days (high temperatures exceeding 95° Fahrenheit) are expected to double by around 2050 (Kinniburgh et al. 2015, p. 83). Shortages in aquifers due to increased temperatures are nearly certain (Loaiciga et al. 2000, p. 193; Mace and Wade 2008, pp. 662, 664–665; Taylor et al. 2012, p. 3), even if precipitation and groundwater recharge remain at current levels, increased groundwater pumping and resultant aquifer shortages due to increased temperatures are nearly certain. Effects of climate change, such as air temperature increases and an increase in drought frequency and intensity, have been shown to be occurring throughout the range of Texas hornshell (Kinniburgh et al. 2015, p. 88), and these effects are expected to exacerbate several of the stressors discussed above, such as water temperature and flow loss (Wuebbles et al. 2013, p. 16). In our analysis of the future condition of the Texas hornshell, we considered climate change to be an exacerbating factor in the increase of fine sediments, changes in water quality, loss of flowing water, and predation. Conservation Measures to address water quality and loss of water resources would also address the threat from climate change.

Floods

Floods occur because of heavy rainfall over land with little plant material to slow down water. Flooding can increase siltation, displace mollusks, alter habitat, and adversely impact water quality (Hastie et al. 2001). Extensive flooding occurred along the Black River in September of 2013 and September of 2014, and both events were considered “100- year floods.” Recent surveys indicate that the Texas hornshell population was not seriously affected by these floods. However, flooding can result in long-term changes to habitat, and monitoring of the Texas hornshell population should continue.

Presence of Host Fish for Texas Hornshell

Host fish are required for Texas hornshell to complete their life cycle and to allow gene flow for the maintenance of a healthy population (Levine et al. 2012). Several of these host fish species have declined in both abundance and distribution (NMDGF 2014), most likely due to the same changes in habitat that have led to range-wide declines in Texas hornshell. Further inventories for monitoring of these species along with appropriate Conservation Actions are included elsewhere within this CCAA.

Competition from Exotic Species

The Asian Clam (*Corbicula fluminea*) is a well-established exotic in the Pecos, Black, and Delaware rivers. It competes with the Texas hornshell in space and in food resources (Sickel 1986), and exotic species, such as the Asian Clam, threaten freshwater mussel populations throughout the United States (NMDGF 2014). However, competition between the two species in the Black River has not been studied. Removal of the species by hand is the only

effective technique currently known, as molluscicides are not species-specific and would negatively impact Texas hornshell populations.

Manmade Dispersal Barriers

On the Black River, the CID diversion dam, as currently constructed, and low-water crossings are physical barriers to the movements of aquatic species, such as Texas hornshell and host fish species. Physical barriers limit dispersal and gene flow of species, restricting expansion of populations. Maintenance of low-water crossings and associated roads may temporarily add sediment to the river downstream. Even without the presence of man-made barriers, high salinity in the Pecos River is a barrier to dispersal for Texas hornshell. For this reason, it is extremely unlikely that Texas hornshell could populate the Pecos River mainstem.

9. Habitat Projects and Conservation Measures

Pursuant to the MOA between the Commissioner and CEHMM, funds collected by CEHMM from Participating Lessees for new surface disturbances on state trust lands will be used to implement Habitat Projects on state trust lands to benefit the Covered Species. Examples of Habitat Projects include streambank stabilization, riparian vegetation restoration, or purchase or lease of water rights to sustain the Covered Species. To promote a coordinated, watershed-based approach, identification and prioritization of Habitat Projects will involve collaboration with scientists and land management staff from the Service, CEHMM, NM Department of Game & Fish, Bureau of Land Management, and other land management or environmental entities working in the CCAA area. This collaboration may occur through the Implementation Committee described in the CEHMM CCA/A or through other means, at the Commissioner's discretion.

Conservation Measures are those measures that Participating Lessees agree to perform as part of their CIs. Conservation Measures are focused on refraining from or mitigating the impacts of activities that could negatively impact the Covered Species, such as avoiding new surface disturbances in or near life history sites or drainages, reducing or curtailing water use when river flows are low, or managing sediment. Management zones will be used to guide the selection of specific Conservation Measures for Lessees that wish to obtain a CI. This CCAA will use the same management zones developed for the CEHMM CCA/A. Those zones are as follows and as shown on the map in Appendix B:

Zone A: Occupied Habitat within the Black River and Delaware River.

Zone B: The Black and Delaware rivers (excluding Zone A in each), Blue Springs, and their associated USGS 100-year floodplain.

Zone C: Ephemeral drainages to the Black and Delaware rivers, including Owl Draw.

Zone D: The area within the CCAA Boundary, not otherwise described in management zones A, B, or C.

Conservation Measures for Participating Lessees' CIs will be very similar or identical to the Conservation Measures developed for the CEHMM CCA/A. The specific Conservation Measures that will be required under any particular CI will be developed in consultation with individual Lessees, subject to concurrence by the Service. The nexus between the Conservation Measures and threats to the Covered Species is described in Appendix C.

Examples of Conservation Measures for Participating Lessees are as follows:

Solid Minerals Mining

Zones A, B, and C: The Commissioner does not issue leases for solid minerals mining in Zones A, B, or C.

Zone D:

1. Educate and provide direction to personnel, agents, and contractors about the Conservation Measures agreed to in the CI and this CCAA;
2. Implement erosion control measures as specified in the CI;
3. Avoid obstructing or disrupting the natural flow of ephemeral drainages;
4. Comply with the USACE Nationwide 12 General Permit, where applicable;
5. Minimize the surface disturbance where feasible;
6. Provide the Commissioner with the permit from New Mexico Energy and Natural Resources Department, Mining and Minerals Division, if applicable;
7. Provide the Commissioner with a Mine Operation Plan (MOP) and Reclamation Plan for New Surface Disturbances greater than 1 acre. The MOP shall include, but is not limited to:
 - i. Orderly development
 - ii. Locations & methods of topsoil storage
 - iii. Overburden stockpiles
 - iv. Tailings disposal
 - v. Dams or impoundments
 - vi. Slope stabilization methods
 - vii. Runoff diversions
 - viii. Solid and liquid waste disposal
 - ix. Spill reporting & cleanup
 - x. Sediment control
 - xi. Security & access control
 - xii. Blasting
 - xiii. Archaeological clearance
 - xiv. Endangered species clearances
 - xv. Comments on Plan View Map
 - xvi. List of all required federal & state permits
 - xvii. Professional Engineer stamp for mines greater than 10 acres

Agriculture and Ranching

Zone A:

1. Refrain from creating any New Surface Disturbance.

2. Follow the grazing plan as agreed upon in the CI (if applicable).
3. Curtail or cease pumping of surface water and groundwater that has a demonstrated direct hydrologic connection to Zone A when flows fall below minimum levels, as agreed upon in the CI (if applicable).
4. Implement or allow the implementation of erosion control along the banks of the Black and Delaware rivers (if applicable).
5. Implement or allow implementation of the vegetation plan as agreed upon in the CI (if applicable).

Zone B:

1. Follow the grazing plan as agreed upon in the CI (if applicable).
2. If flows in the Black or Delaware rivers drop below the minimum levels agreed upon in the CI, limit water pumping in Zone B to the minimum amount necessary for domestic and livestock use, or to prevent crop failure (if applicable).
3. Implement or allow implementation of erosion control in the 100-year floodplain.
4. Refrain from increases in current agricultural practices that could impact Zone A (e.g., increasing grazing pressure and developing new agricultural fields).
5. Implement or allow implementation of the vegetation plan as agreed upon in the CI (if applicable).

Zone C:

1. Follow the grazing plan as agreed upon in the CI (if applicable).
2. If flows in the Black or Delaware rivers drop below the minimum levels agreed upon in the CI, limit water pumping in Zone C to the minimum amount necessary for domestic and livestock use, or to prevent crop failure (if applicable).
3. Implement or allow implementation of the vegetation plan as agreed upon in the CI (if applicable).

Zone D:

1. Follow the grazing plan as agreed upon in the CI (if applicable).
2. Implement or allow implementation of the vegetation plan as agreed upon in the CI (if applicable).

Pumping Water for Sale, Gift, or Trade

A group of subject matter experts will be convened to study the minimum flows needed to support the Covered Species and reach a determination within five years of implementation of this CCAA. In the interim, a minimum flow of 9.3 cfs at the USGS gauge location at the CID dam will be used for the Black River.

Zones A, B, and C: Curtail or cease pumping of surface water and groundwater that has a demonstrated direct hydrologic connection to Zone A when flows fall below minimum levels, per the specific measures agreed upon in the Participants' CI.

Oil and Gas and Related Infrastructure

Zone A: No New Surface Disturbance in Occupied Habitat within the Black River and Delaware River.

Zone B: The Participant will exercise good faith efforts to avoid Zone B. Where the Participant cannot avoid Zone B, this CCAA and its associated CI authorizes New Surface Disturbance subject to the following:

1. The oil and gas Participant shall identify and submit to the Commissioner a reason that Zone B cannot be avoided. Reasons may include, but are not limited to:
 - i. The mineral estate cannot otherwise be accessed;
 - ii. The Participant lacks surface or right-of-way access;
 - iii. Contractual or landowner restrictions;
 - iv. The mineral resource cannot be accessed utilizing proven technology reasonably available in the Permian Basin;
 - vi. Safety considerations;
 - vii. The project would become economically infeasible; or,
 - viii. Others, as approved by the Commissioner.
2. If the Commissioner concurs that Zone B cannot be avoided, the oil and gas Participant shall take the following steps to minimize the potential impacts:
 - ii. Implement erosion control measures in accordance with Reasonable and Prudent Practices for Stabilization (RAPPS)²;
 - iii. Comply with Spill Prevention, Control, and Countermeasure (SPCC)³ requirements in accordance with 40 CFR Part 112;
 - iv. Comply with the United States Army Corp of Engineers (USACE) Nationwide 12 General Permit, where applicable;
 - vi. Educate personnel, agents, and contractors about the requirements of the CI and this CCAA and provide direction in accordance with the Conservation Measures;
 - vii. Provide the Commissioner a copy of the permit from New Mexico Oil Conservation Division (NMOCD), if applicable; and,
 - viii. Provide the Commissioner plats or other electronic media describing the New Surface Disturbance and existing surface disturbance utilized for the Project.

Zone C: The oil and gas Participant will exercise good faith efforts to avoid obstructing or disrupting the natural flow of ephemeral drainages. If it is not feasible to avoid these areas, the Participant shall take the following steps to minimize the potential impacts:

1. Implement erosion control measures in accordance with the Reasonable and Prudent Practices for Stabilization (RAPPS);
2. Comply with SPCC requirements in accordance with 40 CFR Part 112;
3. Educate personnel, agents and contractors about the requirements of the CI and this CCAA and provide direction in accordance with the Conservation Measures;
4. Comply with the USACE Nationwide 12 General Permit, where applicable;
5. Utilize technologies (like underground borings for pipelines), where feasible;
6. Provide the Commissioner with a copy of the permit from NMOCD, if applicable; and,
7. Provide the Commissioner plats or other electronic media describing the New Surface Disturbance for the Project.

Zone D:

1. Comply with SPCC requirements in accordance with 40 CFR Part 112;
2. If requested by the Commissioner, provide SPCC plans for Participant's New Surface Disturbance of Enrolled Properties subject to the participant's CI;

² Available at <http://www.ipaa.org/wp-content/uploads/downloads/2012/01/2004-04-RAPPS.pdf>.

³ Available at <https://www.epa.gov/sites/production/files/documents/spccbluebroch.pdf>.

3. Provide the Commissioner with a copy of the permit from NMOCD, if applicable; and
4. Provide the Commissioner plats or other electronic media describing the New Surface Disturbance for the Project.

10. Expected Benefits

As identified in the FWS's Candidate Conservation Agreement with Assurances Revised Policy (81 FR 95164), and regulations at 50 CFR 17.22, to enter into a CCAA and issue a permit and assurances, the Service must determine that "the implementation of the terms of the CCAA is reasonably expected to provide a net conservation benefit to the affected covered species included in the permit . . ." Consistent with the CCAA policy, meeting the CCAA standard does not depend on the number of acres enrolled, and adoption of the CCAA and enrollment of landowners does not guarantee that listing will not be necessary. The Service has determined that this CCAA meets the standard specified in the CCAA policy and regulations.

Conservation benefits for the Covered Species from implementation of the CCAA will accrue from the protection and improvement of habitat through Lessees' Conservation Measures, and by the Commissioner's implementation of Habitat Projects on state trust lands using funds contributed by Lessees. State trust land beneficiaries will benefit from improvements in land stewardship and assurances that revenue-generating activities remain viable. Participating Lessees on state trust lands will benefit from the assurances that they will not incur additional land use restrictions if any of the Covered Species are listed under the ESA in the future.

11. Certificates of Inclusion

Prior to the effective date of listing of any of the Covered Species, all Lessees on state trust lands within the CCAA boundary are eligible to participate in the CCAA by voluntarily agreeing to implement Conservation Measures and signing a CI. Lessees must hold their own CI specific to their Covered Activities to receive assurances. If a parcel is enrolled into a CI by a Lessee prior to the listing of any of the Covered Species, subsequent Lessees will have the option of receiving the assurances under the CCAA by signing a new CI.

To simplify participation for Lessees that are enrolled in more than one candidate conservation agreement, the Conservation Measures contained in CIs issued under this CCAA will be consistent with Conservation Measures contained in CIs issued under CEHMM's CCA/A. A standard template for CIs can be found in Appendix E. The standard CI might not fit every participant, and modifications shall be approved if the Land Office and the Service concur that the modifications will result in the same or increased conservation benefits as compared to the CI template.

12. Enrollment Process and Fee Structure

Each Participating Lessee will confer with the Commissioner to determine whether to enroll All Activities or on a Parcel-by-Parcel basis, and to develop Conservation Measures for the CI. If enrollment and Habitat Conservation fees are required (i.e., oil and gas Lessees), the fees will be paid

directly to CEHMM for administration pursuant to the MOA between the Commissioner and CEHMM. Lessees enrolling in the Land Office CCAA that are also participating in the CEHMM CCA/A will not be required to pay additional fees to participate in this CCAA. The anticipated enrollment process and fee structure can be found in Appendix F.

Rather than paying Habitat Conservation Fees, the Lessee may elect to instead contribute in-kind services, including but not limited to the following:

- Revegetation along rivers with native vegetation with Service and Commissioner approval
- Bank stabilization along rivers, i.e., plant willows, fence off river, etc. with native vegetation with FWS and CEHMM approval
- Land acquisition
- Water quality monitoring
- Installing fences along river corridors
- Water right acquisition or use of water right to benefit the Covered Species
- Abandon or move points of diversion outside the zone of influence of the river
- Contract partners for research design and activities
- Erosion control measures
- Brush control
- Woody, invasive control
- Native seed bank
- Controlled burns
- Sponsor translocation of Covered Species
- Removal and/or remediation of oil and gas facilities including, but not limited to, roads, pads, pits, pipelines, right-of-ways, and other related facilities or development
- Improve road crossings
- Data collection

The Commissioner will work with Lessees that wish to provide in-kind services to define, value, and obtain Service approval of the proposed in-kind services.

13. Covered Activities

This CCAA provides assurances to the Land Office for activities related to carrying out its constitutional mandate to generate revenues for trust beneficiaries, including all activities associated with agricultural leasing, oil, gas and minerals leasing, and commercial leasing; grants of easements or rights-of way; site remediation and restoration; removal of infrastructure; and Habitat Projects.

Conservation, research and monitoring projects performed or approved by the Commissioner will also be Covered Activities. Projects may include, but are not limited to, mark/recapture studies, presence/absence surveys, captive breeding and reintroduction, population surveys, habitat assessments, water quality monitoring, and other similar activities to study, monitor, and assess the species.

Each CI will provide assurances for the Lessee's lawful activities conducted on state trust lands to effectuate the purposes of the lease or grant, including but not limited to activities associated with oil and gas development; ranching, farming, or other agriculture; sale, gift or trade of water; and mining and solid mineral extraction.

14. Level/Type of Take/Impacts

Specific authorization of incidental take is provided as part of the enhancement of survival permit issued by the Service in conjunction with this CCAA. Should any of the Covered Species become listed under the Act, authorization for incidental take under the permit is limited to the Covered Activities of the Land Office and participating Lessees. Incidental take could occur as a result of many Covered Activities, but the level of incidental take is very difficult to quantify or, in many cases, to attribute to a particular activity. Nevertheless, the Conservation Measures and Habitat Projects that will be implemented under this CCAA are expected to avoid and minimize incidental take by reducing erosion and sedimentation, slowing runoff, stabilizing streambanks, ensuring minimum flows, and otherwise protecting or restoring habitat.

15. Assurances Provided

Through this CCAA, the Service provides assurances to the Land Office and Participating Lessees that no additional conservation measures or additional land, water, or resource use restrictions, beyond those voluntarily agreed to and described in this CCAA or associated CI, will be required should one or more of the Covered Species become listed as a threatened or endangered species in the future, so long as the CCAA and CIs are properly implemented. These assurances will be authorized with the issuance under section 10(a)(1)(A) of the Endangered Species Act of an enhancement of survival permit, which will become effective if one or more of the Covered Species is listed in the future. The Permit, when it becomes effective, will also authorize the incidental take of the species by the Commissioner and participating Lessees, as long as the take is consistent with the terms of this CCAA and relevant CI.

16. Assurances Provided to Land Office and Participating Lessees in Case of Changed or Unforeseen Circumstances

A. Changed Circumstances

"Changed circumstances" are those alterations in circumstances that can reasonably be anticipated and planned for in the CCAA. Low flow in the occupied reach of the Black River or Delaware River due to drought or water extraction is an example of a changed circumstance.

Changed circumstances provided for in the CCAA

If additional conservation measures are necessary to respond to changed circumstances and the measures were set forth in the CCAA or CI, the enrolled Property Owner will implement the measures specified in the CCAA and their CI.

Changed circumstances not provided for in the CCAA

If additional conservation measures not provided for in the CCAA's operating conservation program are necessary to respond to changed circumstances, the Service will not require any conservation measures in addition to those provided for in the CCAA without the consent of the enrolled Property Owner, provided the CCAA is being properly implemented.

B. Unforeseen Circumstances

"Unforeseen circumstances" are changes in circumstances that could not reasonably have been anticipated by the Commissioner and FWS at the time of the CCAA's negotiation and development, and result in a substantial and adverse change in the status of the species. If additional conservation measures are necessary to respond to unforeseen circumstances, the Service may require additional measures of the enrolled Property Owner where the CCAA and CI is being properly implemented, but only if such measures are limited to modifications within the CCAAs conservation strategy for the affected species, and only if those measures maintain the original terms of the CCAA to the maximum extent possible. Additional conservation measures will not involve the commitment of additional land, water, or financial compensation, or additional restrictions on the use of land, water, or other natural resources available for development or use under the original terms of the CCAA and CI without the consent of the enrolled Property Owner.

The Service will have the burden of demonstrating that unforeseen circumstances exist, using the best scientific and commercial data available. These findings must be clearly documented and based upon reliable technical information regarding the status and habitat requirements of the affected species. The Service will consider, but not be limited to, the following factors:

- (1) Size of the current range of the affected species;
- (2) Percentage of range adversely affected by the CCAA;
- (3) Percentage of range conserved by the CCAA;
- (4) Ecological significance of that portion of the range affected by the CCAA;
- (5) Level of knowledge about the affected species and the degree of specificity of the species' conservation program under the CCAA; and
- (6) Whether failure to adopt additional conservation measures would appreciably reduce the likelihood of survival and recovery of the affected species in the wild.

17. Measuring and Reporting

The Commissioner shall monitor and measure the effectiveness of Habitat Projects on state trust lands. Specific monitoring requirements and measurement criteria shall be included as part of the overall work scope of the Habitat Project to ensure that any needed baseline data are gathered prior to Habitat Project implementation. The Commissioner shall also document the Conservation Measures or in-kind services performed by Participating Lessees for the benefit of the Covered Species.

The Commissioner will be responsible for annual monitoring and reporting for state trust lands enrolled in this CCAA. Pursuant to the terms of their MOA, the Commissioner and CEHMM will jointly prepare and submit a combined annual report to the Service by March 1 of each year. This CCAA adopts the monitoring and reporting guidelines developed for the CEHMM CCA/A, to include the following information:

- (1) Participants enrolled under the CCAA over the past year, including copies of the completed CI;
- (2) Activities conducted by the Participants and how impacts to the Covered Species were minimized;
- (3) Habitat management and habitat conditions in the Covered Area and on all Enrolled Properties over the past year;
- (4) Effectiveness of habitat management activities implemented in previous years at meeting the intended conservation benefits;
- (5) Results of monitoring, including population surveys and studies, over the past year;
- (6) Any mortality or injury that are observed of the Covered Species over the year;
- (7) Funds used for habitat conservation on private and state lands, including how they were used and how much are remaining; and
- (8) Captive-reared or translocated Texas hornshells or other included Covered Species that were released on Enrolled Properties.

18. Compliance Monitoring

The Commissioner shall be responsible for monitoring and reporting specified herein related to implementation of the CCAA and fulfillment of its provisions, including implementation of agreed-upon conservation measures, and take authorized by the permit. The Commissioner shall make contact with and, after reasonable prior notice to the Lessee, conduct a site visit for Participating Lessees at least once per year for purposes of monitoring compliance with the terms of the Lessee's CI. The Service, after reasonable prior notice to the Land Office and Participating Lessee, may also enter the enrolled lands to ascertain compliance with the CCAA. Non-compliance by Participating Lessee with any of the terms of the CI discovered by one Party shall be reported immediately to the other Party.

If the Commissioner or the Service determines that a Lessee is failing to implement the Conservation Measures agreed to in the CI, the Commissioner shall notify the Lessee by mail and email of the nature of the violation and the corrective actions that are required. The Lessee shall complete corrective actions within sixty days of receipt of the first notification, or within fifteen days of receipt of the first notification, provide an explanation for why corrective actions cannot be completed within sixty days and an anticipated completion date. If corrective actions have not been completed within sixty days of receipt of the first notice or by a date specified by the Commissioner, the Commissioner shall provide a second notice of violation to the Lessee by mail and email. If the Lessee has not completed corrective actions within thirty days of receipt of the second notice, the

Commissioner may issue the Lessee a Conservation Measure Violation (CMV) by email and U.S. mail with proof of delivery.

A Lessee that receives a CMV can request Executive Committee review by notifying the Commissioner by email, fax, U.S. mail, or in person within 30 days of receipt of the CMV. The Executive Committee shall review the facts surrounding the issuance of the CMV and determine the outcome within 60 days of receiving the request for review from the Lessee, and will notify the Lessee by email and U.S. mail with proof of delivery within 10 days of a determination. If a Lessee acquires a total of three unresolved CMVs under any of the candidate conservation agreements for the Covered Species in which the Lessee is enrolled, the Commissioner may take actions, up to and including termination of some or all of the CI. Termination of all or a portion of a CI by the Commissioner shall constitute an agency determination as defined in Section 19.2.15.7.A. NMAC.

In the case of Lessee noncompliance with Conservation Measures that presents and immediate or severe threat to any of the Covered Species, the Commissioner shall request the Lessee to correct the noncompliance immediately or within a specified period of time that is reasonable under the circumstances. Failure of the Lessee to correct the noncompliance within the specified time will be deemed an unresolved CMV, subject to the Executive Committee review process described above.

19. Biological Monitoring

The Land Office shall grant a right of access permit to the Service or New Mexico Department of Game and Fish for the purpose of biological monitoring of the Covered Species. The Commissioner has discretion to grant a right of access permit to other entities such as universities or conservation organizations for the purpose of conducting monitoring or scientific research related to the Covered Species. Requests for such permits shall not be unreasonably denied.

20. Notification of Take Requirement

By signature of this CCAA and any associated CIs, the Land Office shall notify the Service of any emergencies or unexpected circumstances that could result in, or has resulted in, an incidental take. The Land Office shall notify the Service of such emergencies or circumstances as soon as the Land Office becomes aware of them.

21. Duration of CCAA and Permit

The CCAA, including any commitments related to funding under Service programs, will be in effect for 30 years following its approval and signing by the Parties. The section 10(a)(1)(A) permit authorizing take of the species will become effective on the date of the final rule listing a species and will expire when this CCAA expires or is otherwise suspended or terminated. The permit and CCAA may be extended beyond the specified terms prior to permit expiration through the permit renewal process and with agreement of the Parties.

22. Modification of Requirements

After approval of the CCAA, the Service may not impose any new requirements or conditions on, or modify any existing requirements or conditions applicable to, a landowner or successor in interest to the landowner, to compensate for changes in the conditions or circumstances of any species or ecosystem, natural community, or habitat covered by the CCAA except as stipulated in 50 CFR 17.22(d)(5) and 17.32(d)(5).

23. Modification of the CCAA

Any Party may propose modifications or amendments to this CCAA by providing written notice to, and obtaining the written concurrence of, the other Party. Such notice shall include a statement of the proposed modification, the reason for it, and its expected results. The Parties will use their best efforts to respond to proposed modifications within 60 days of receipt of such notice. Proposed modifications will become effective upon the other Party's written concurrence.

24. Amendment of the Permit

The permit may be amended to accommodate changed circumstances in accordance with all applicable legal requirements, including but not limited to the Endangered Species Act, the National Environmental Policy Act, and the Service's permit regulations at 50 CFR 13 and 50 CFR 17. The party proposing the amendment shall provide a statement describing the proposed amendment and the reasons for it.

25. Termination of the CCAA

The Commissioner may, for good cause, terminate implementation of the CCAA's voluntary management actions prior to the CCAA's expiration date, even if the expected benefits have not been realized. If the CCAA is terminated without good cause, however, the Commissioner shall surrender the enhancement of survival permit at termination, thus relinquishing its take authority (if a Covered Species has become listed) and the assurances granted by the permit and assurances granted to Lessees in their CIs. The Commissioner shall give 60 days' written notice to the Service and participating Lessees of its intent to terminate the CCAA, and must give the Service an opportunity to relocate affected species within 90 days of the notice.

26. Permit Suspension or Revocation

The Service may suspend or revoke the permit for cause in accordance with the laws and regulations in force at the time of such suspension or revocation (50 CFR 13.28(a)). The Service may also, as a last resort, revoke the permit if continuation of permitted activities would likely result in jeopardy to covered species (50 CFR 17.22/32(d)(7)). The Service will revoke because of jeopardy concerns only after first implementing all practicable measures to remedy the situation.

27. Remedies

Each Party shall have all remedies otherwise available to enforce the terms of the CCAA and the permit. No Party shall be liable in damages for any breach of this CCAA, any performance or failure to perform an obligation under this CCAA, or any other cause of action arising from this CCAA.

28. Dispute Resolution

The Parties agree to work together in good faith to resolve any disputes, using dispute resolution procedures agreed upon by all Parties.

29. Succession and Transfer

This CCAA shall be binding on and shall inure to the benefit of the Parties and their respective successors and transferees, (i.e., new Lessees) in accordance with applicable regulations (50 CFR 13.24 and 13.25). The rights and obligations under this CCAA shall run with the ownership or lease of the enrolled property and are transferable to subsequent non-Federal property owners pursuant to 50 CFR 13.25. The enhancement of survival permit issued to the Land Office is also transferable to the new owner(s) pursuant to 50 CFR 13.25. If the CCAA and permit are transferred, the new owner(s) will have the same rights and obligations with respect to the enrolled property as the original owner. The new owner(s) also will have the option of receiving CCAA assurances by signing a new CCAA and receiving a new permit. The Land Office shall notify the Service in writing of any transfer of ownership, so that the Service can attempt to contact the new owner, explain the baseline responsibilities applicable to the property, and seek to interest the new owner in signing the existing CCAA or a new one to benefit listed species on the property. Assignment or transfer of the permit shall be governed by Service regulations in force at the time.

30. Availability of Funds

Implementation of this CCAA is subject to the requirements of the Anti-Deficiency Act and the availability of appropriated funds. Nothing in this CCAA will be construed by the Parties to require the obligation, appropriation, or expenditure of any funds from the U.S. Treasury. The Parties acknowledge that the Service will not be required under this CCAA to expend any Federal agency's appropriated funds unless and until an authorized official of that agency affirmatively acts to commit to such expenditures as evidenced in writing.

Implementation of this CCAA is also contingent upon sufficient appropriations and authorization being made by the New Mexico Legislature for the Land Office's performance of its obligations under the CCAA.

31. No Third-Party Beneficiaries

This CCAA does not create any new right or interest in any member of the public as a third-party beneficiary, nor shall it authorize anyone not a party to this CCAA to maintain a suit for personal

injuries or damages pursuant to the provisions of this CCAA. The duties, obligations, and responsibilities of the Parties to this CCAA with respect to third parties shall remain as imposed under existing law.

32. Indemnification and Warranties

The Land Office and Service acknowledge that their liabilities are limited by the New Mexico Tort Claims Act (§41-4-1 et seq. NMSA 1978) and the federal Tort Claims Act (28 U.S.C. §1402 et seq.), respectively. To the extent permitted under their respective tort claims acts, the Land Office and Service agree to be responsible for the acts and omissions of their agency, employees, agents and contractors. Each party shall, at their own cost and expense, obtain and maintain insurance of the type and amounts required by their respective tort claims, risk management or loss prevention rules or policies to protect their operations, property, employees and agents for all activities under this CCAA.

33. Notices and Reports

Any notices and reports, including monitoring and annual reports, required by this CCAA shall be delivered to the persons listed below, as appropriate:

Laura Riley, Deputy Commissioner
New Mexico State Land Office
310 Old Santa Fe Trail
PO Box 1148
Santa Fe, NM 87504-1148

Debra Hill
New Mexico Energy Streamlining Program Coordinator
Southwest Regional Office
U.S. Fish and Wildlife Service
2105 Osuna NE
Albuquerque, NM 87113

IN WITNESS WHEREOF, THE PARTIES HERETO have, as of the last signature date below, executed this Candidate conservation Agreement with Assurances to be in effect as of the date that the Service issues the permit.

Commissioner of Public Lands
New Mexico State Land Office

Date

Regional Director
U.S. Fish and Wildlife Service

Appendix B: Map of Management Zones

Appendix C: Nexus Between Conservation Measures or Habitat Projects and Threats to the Covered Species (adapted from CEHMM CCA/A)

Threat	Conservation Measure	Covered Activity	Anticipated Result
Water Quality and Loss of Water Resources	Comply with SPCC requirements	Oil and Gas and Related Infrastructure	Prevent contamination
	Notify Commissioner within 72 hours after Emergency Operations that result in New Surface Disturbance		
	Maintain minimal stream flows and cease pumping if flows reach 9.3 cfs at the gauge located at the CID dam	Pumping Water For Sale, Gift, or Trade	Prevent loss of water resources
	No New Surface Disturbance in Occupied Habitat within the Black and Delaware rivers	All Participants	Prevent loss of water resources
	Install speed bump or lower speed limit at low water crossings	Eddy County (outside scope of this CCAA)	Prevent contamination by reducing chances of accidents.
Runoff and Erosion	Follow RAPPS requirements	Oil and Gas and Related Infrastructure	Reduce erosion and sedimentation
	Within the Black and Delaware rivers (excluding Zone A) and Blue Springs and their associated USGS 100-year floodplain, exercise good faith efforts to avoid Zone B	All Participants	
	Clear invasive vegetation and replant with native grasses, trees, or shrubs as specified in a Vegetation Management Plan	Agriculture and Ranching	
	Prevent cattle grazing in Sensitive Habitat Areas Occupied Habitat		
	Attempt to decrease and no increases in current agricultural practices in Zone A and B		
Collection	None		
Floods	Habitat Projects for bank stabilization and erosion control	All Participants	Prevent loss of water resources and habitat
Diminished Presence of Host Fish	The Commissioner will use funds for the reintroduction or stocking of host species	All Participants	Increase host fish
	Notify the Commissioner within 72 hours after Emergency Operations that result in New Surface Disturbance		Prevent contamination, prevent loss of water resources
	No New Surface Disturbance in Occupied Habitat within the Black and Delaware rivers		Prevent loss of water resources and habitat
Competition from Exotic Species	None		
Manmade Barriers	Removal or improvement/replacement of low water crossings when funding becomes available	Eddy County (outside scope of this CCAA)	Allow fish passage
General	Allow access to Enrolled Property upon appropriate notice to the Participant	All Participants	Allows for conservation projects, monitoring, and research of Covered Species

Appendix D: Conservation Measures for Lessees

Management zones will be used to guide the development of specific Conservation Measures for Lessees that wish to obtain a CI. This CCAA will use the same management zones developed for the CEHMM CCA/A. Those zones are as follows and as shown on the map in Appendix C:

Zone A: Occupied Habitat within the Black River and Delaware River.

Zone B: The Black and Delaware rivers (excluding Zone A in each), Blue Springs, and their associated USGS 100-year floodplain.

Zone C: Ephemeral drainages to the Black and Delaware rivers, including Owl Draw.

Zone D: The area within the CCAA Boundary, not otherwise described in management zones A, B, or C.

Conservation Measures for participating Lessees' CIs will be very similar or identical to the Conservation Measures developed for the CEHMM CCA/A. The specific Conservation Measures that will be required under any particular CI will be developed in consultation with individual Lessees, subject to approval by the Service. A group of subject matter experts will be convened to study the minimum flows needed to support the Covered Species and reach a determination within five years of implementation of this CCAA. In the interim, a minimum flow of 9.3 cfs at the USGS gauge location at the CID dam will be used for the Black River.

Examples of Conservation Measures for Participating Lessees are as follows:

Solid Minerals Mining

Zones A, B, and C: The State Land Office does not issue solid minerals mining leases in Zones A, B, or C.

Zone D:

1. Educate and provide direction to personnel, agents, and contractors about the Conservation Measures agreed to in the CI and this CCAA;
2. Implement erosion control measures as specified in the CI;
3. Avoid obstructing or disrupting the natural flow of ephemeral drainages;
4. Comply with the USACE Nationwide 12 General Permit, where applicable;
5. Minimize the surface disturbance where feasible;
6. Provide the Commissioner with the permit from New Mexico Energy and Natural Resources Department, Mining and Minerals Division, if applicable;
7. Provide the Commissioner with a Mine Operation Plan (MOP) and Reclamation Plan for New Surface Disturbances greater than 1 acre. The MOP shall include, but is not limited to:
 - xviii. Orderly development
 - xix. Locations & methods of topsoil storage
 - xx. Overburden stockpiles
 - xxi. Tailings disposal
 - xxii. Dams or impoundments

- xxiii. Slope stabilization methods
- xxiv. Runoff diversions
- xxv. Solid and liquid waste disposal
- xxvi. Spill reporting & cleanup
- xxvii. Sediment control
- xxviii. Security & access control
- xxix. Blasting
- xxx. Archaeological clearance
- xxxi. Endangered species clearances
- xxxii. Comments on Plan View Map
- xxxiii. List of all required federal & state permits
- xxxiv. Professional Engineer stamp for mines greater than 10 acres

Agriculture and Ranching

Zone A:

1. Refrain from creating any New Surface Disturbance.
2. Follow the grazing plan as agreed upon in the CI (if applicable).
3. Curtail or cease pumping of surface water and groundwater that has a demonstrated direct hydrologic connection to Zone A when flows fall below minimum levels, as agreed upon in the CI (if applicable).
4. Implement or allow the implementation of erosion control along the banks of the Black and Delaware rivers (if applicable).
5. Implement or allow implementation of the vegetation plan as agreed upon in the CI (if applicable).

Zone B:

1. Follow the grazing plan as agreed upon in the CI (if applicable).
2. If flows in the Black or Delaware rivers drop below the minimum levels agreed upon in the CI, limit water pumping in Zone B to the minimum amount necessary for domestic and livestock use, or to prevent crop failure (if applicable).
3. Implement or allow implementation of erosion control in the 100-year floodplain.
4. Refrain from increases in current agricultural practices that could impact Zone A (e.g., increasing grazing pressure and developing new agricultural fields).
5. Implement or allow implementation of the vegetation plan as agreed upon in the CI (if applicable).

Zone C:

1. Follow the grazing plan as agreed upon in the CI (if applicable).
2. If flows in the Black or Delaware rivers drop below the minimum levels agreed upon in the CI, limit water pumping in Zone C to the minimum amount necessary for domestic and livestock use, or to prevent crop failure (if applicable).
3. Implement or allow implementation of the vegetation plan as agreed upon in the CI (if applicable).

Zone D:

3. Follow the grazing plan as agreed upon in the CI (if applicable).
4. Implement or allow implementation of the vegetation plan as agreed upon in the CI (if applicable).

Pumping Water for Sale, Gift, or Trade

A group of subject matter experts will be convened to study the minimum flows needed to support the Covered Species and reach a determination within five years of implementation of this CCAA. In the interim, a minimum flow of 9.3 cfs at the USGS gauge location at the CID dam will be used for the Black River.

Zones A, B, and C –Curtail or cease pumping of surface water and groundwater that has a demonstrated direct hydrologic connection to Zone A when flows fall below minimum levels, per the specific measures agreed upon in the Participants’ CI.

Oil and Gas and Related Infrastructure

Zone A: No New Surface Disturbance in Occupied Habitat within the Black River and Delaware River.

Zone B: The Participant will exercise good faith efforts to avoid Zone B. Where the Participant cannot avoid Zone B, this CCAA and its associated CI authorizes New Surface Disturbance subject to the following:

1. The oil and gas Participant shall identify and submit to the Commissioner a reason that Zone B cannot be avoided. Reasons may include, but are not limited to:
 - i. The mineral estate cannot otherwise be accessed;
 - ii. The Participant lacks surface or right-of-way access;
 - iii. Contractual or landowner restrictions;
 - iv. The mineral resource cannot be accessed utilizing proven technology reasonably available in the Permian Basin;
 - v. Safety considerations;
 - vi. The project would become economically infeasible; or,
 - vii. Others, as approved by the Commissioner.
2. If the Commissioner concurs that Zone B cannot be avoided, the oil and gas Participant shall take the following steps to minimize the potential impacts:
 - i. Implement erosion control measures in accordance with Reasonable and Prudent Practices for Stabilization (RAPPS)⁴;
 - ii. iComply with Spill Prevention, Control, and Countermeasure (SPCC)⁵ requirements in accordance with 40 CFR Part 112;
 - iii. Comply with the United States Army Corp of Engineers (USACE) Nationwide 12 General Permit, where applicable;
 - iv. Educate personnel, agents, and contractors about the requirements of the CI and this CCAA and provide direction in accordance with the Conservation Measures;
 - v. Provide the Commissioner a copy of the permit from New Mexico Oil Conservation Division (NMOCD), if applicable; and,
 - vi. Provide the Commissioner plats or other electronic media describing the New Surface Disturbance and exiting surface disturbance utilized for the Project.

⁴ Available at <http://www.ipaa.org/wp-content/uploads/downloads/2012/01/2004-04-RAPPS.pdf>.

⁵ Available at <https://www.epa.gov/sites/production/files/documents/spccbluebroch.pdf>.

Zone C: The oil and gas Participant will exercise good faith efforts to avoid obstructing or disrupting the natural flow of ephemeral drainages. If it is not feasible to avoid these areas, the Participant shall take the following steps to minimize the potential impacts:

1. Implement erosion control measures in accordance with the Reasonable and Prudent Practices for Stabilization (RAPPS);
2. Comply with SPCC requirements in accordance with 40 CFR Part 112;
3. Educate personnel, agents and contractors about the requirements of the CI and this CCAA and provide direction in accordance with the Conservation Measures;
4. Comply with the USACE Nationwide 12 General Permit, where applicable;
5. Utilize technologies (like underground borings for pipelines), where feasible;
6. Provide the Commissioner with a copy of the permit from NMOCD, if applicable; and,
7. Provide the Commissioner plats or other electronic media describing the New Surface Disturbance for the Project.

Zone D:

1. Comply with SPCC requirements in accordance with 40 CFR Part 112;
2. If requested by the Commissioner, provide SPCC plans for Participant's New Surface Disturbance of Enrolled Properties subject to the participant's CI;
3. Provide the Commissioner with a copy of the permit from NMOCD, if applicable; and
4. Provide the Commissioner plats or other electronic media describing the New Surface Disturbance for the Project.

Notification of New Surface Disturbance Requirements for All Zones:

No less than 15 days prior to commencing a New Surface Disturbance or seismic activities, the Participant shall:

1. Consult with the Commissioner to assess the potential impacts to the Covered Species and their habitat. Upon request from the Participant, the Commissioner will make recommendations to reduce potential impacts to the Covered Species and their habitat and to reduce potential fees for New Surface Disturbance activities proposed within the Covered Area.
2. Provide the Commissioner with a description of the proposed New Surface Disturbance that includes:
 - i. Survey plats, GIS shapefiles, Google Earth KML, or other appropriate documentation of proposed surface disturbing activities within the Covered Area;
 - ii. Anticipated timeframe that surface disturbing activities would occur;
 - iii. Notice not less than 15 days in advance of New Surface Disturbance and seismic activities to allow CEHMM to deduct the appropriate Habitat Conservation Fees;
3. Provide the Commissioner additional notice not less than 3 days prior to commencement of New Surface Disturbance for Initial Project development; and,
4. Provide the Commissioner notice not less than 3 days in advance of any changes to prior notice of New Surface Disturbance.

The Commissioner, in cooperation with the Participant, will complete the following:

1. Review the description of the New Surface Disturbance submittal by Participants to determine if it is complete;
2. Conduct onsite inspections of the projects if necessary;
3. Consult with the Executive Committee as needed on New Surface Disturbance within the Covered Area to determine how Participant's proposed activities could proceed; and,
4. Calculate Habitat Conservation Fees for the proposed New Surface Disturbances.

Appendix E: CI template

**CERTIFICATE OF INCLUSION FOR [Participant Name]
in the
New Mexico State Land Office Candidate Conservation Agreement with Assurances for the
Texas Hornshell Mussel (*Popenaias popcii*) and other Covered Species**

CI Number: _____

This certifies that the Participant described herein is included within the scope of the attached Candidate Conservation Agreement with Assurances (CCAA) for the Texas Hornshell and other Covered Species under the authority of Section 10(a)(1)(A) of the Endangered Species Act of 1973, as amended (ESA), 16 U.S.C. 1531-1544. A Participant must be a Property Owner. A Property Owner, as defined by 50 CFR §17.3, is a person with a fee simple, leasehold, or property interest (including owners of water or other natural resources), or any other entity that may have a property interest, sufficient to carry out the proposed management activities, subject to applicable state law, on non-Federal land.

The goal of the U.S. Fish and Wildlife Service (Service), New Mexico State Land Commissioner (Commissioner), and the Participant is to reduce and/or eliminate threats to the Texas hornshell and other Covered Species. By agreeing to conduct the Conservation Measures described herein, the Service will provide the Participant with regulatory certainty (assurances) concerning land-use restrictions that might otherwise apply should the Texas hornshell or other Covered Species become listed as a threatened or “endangered” species under the Endangered Species Act.

This Certificate of Inclusion (CI) is a voluntary agreement among the Service, Commissioner, and the Participant. Through this CI, the Participant voluntarily commits to implement or fund specific Conservation Actions that will reduce and/or eliminate threats to the Texas hornshell and other Covered Species. By signing below, the Participant acknowledges that he or she has read and understands the CCAA and this CI. He or she further acknowledges that the CCAA may not be sufficient to prevent the listing of the species.

Participant’s Name: _____

Address: _____

Phone: _____

Email: _____

I. ENROLLED PROPERTY.

By executing this CI, the Participant affirms that to the best of its knowledge it is a Property Owner of the Enrolled Property as defined by 50 CFR §17.3, which provides that a Property Owner for these purposes is a person or entity with a fee simple, leasehold, or property interest (including owners of water or other natural resources), sufficient to carry out the Conservation Measures and any other management activities contemplated by this CI, the CCAA and the Permit, subject to applicable state law, on enrolled, state trust land. This CI cannot be amended without the written agreement of all signatories.

A. Enrollment.

Enrollment of property in this CI does not guarantee approval of an application to cause New Surface Disturbance by regulatory agencies (state or federal) and subsequent approval of any permit does not guarantee adherence to the CI. The Participant is enrolling the following properties (indicate which enrollment type and attach description of enrolled properties):

_____ Enrollment of All Activities on State Trust Land Holdings within the Covered Area.

The Participant is enrolling all of its activities on state trust lands leases it holds within the Covered Area (Enrolled Properties). If requested by the Commissioner, GIS shapefiles of all Enrolled Properties on which the Participant operates must be supplied to the Commissioner prior to the CI being effective. For tracking purposes, the Participant will provide an update to the Commissioner of its Enrolled Properties on an annual basis, no later than October 1. Outside of this annual update, GIS shapefiles of all Enrolled Properties on which the Participant operates may be requested by the Commissioner or FWS on limited occasions by special request.

_____ Parcel-by-Parcel Enrollment.

If the Participant enrolls Parcel-by-Parcel, the Participant will provide a list of Enrolled Properties (leases or portions of leases) to the Commissioner that includes lease number, detailed legal description, and acreage for each enrolled parcel in this CI. If requested by the Commissioner, a GIS shapefile depicting the information is also required at enrollment.

B. Transfers of Enrolled Property by Participants to Third Parties.

Participants may transfer ownership of Enrolled Property to a third party before or after a listing decision. If a Participant chooses to transfer ownership of Enrolled Property to a third party, participation in the CCAA will only continue if the transferee is a Participant or elects to become a Participant through execution of a new CI.

If the transferee is not already a Participant and none of Covered Species is listed, the transferee may enroll in the CCAA at any time prior to listing of one or more of the Covered Species. If the transferee is not already Participant and one or more of the Covered Species is listed, the transferee may sign a new CI within 30 days of acquiring the Enrolled Property. All terms and conditions of the CCAA and CI will be assumed by the new Participant.

New Participants may enroll either through All Activities or Parcel-by-Parcel methods of enrollment. If the new Participant enrolls via the Parcel-by-Parcel method after a listing occurs, the new Participant may not enroll additional properties that were not Enrolled Properties at the time of the listing. If the new Participant enrolls via the All Activities method, the new Participant may

enroll all of its activities within the Covered Area. In each case, the new Participant must provide the Commissioner with the information described in Section A.

Transferors, and transferees that are Participants, are responsible for revising GIS shapefiles and lists of Enrolled Property to reflect transfers of Enrolled Property in annual updates provided to the Commissioner.

C. Addition and Removal of Enrolled Properties.

This section addresses Participants' ability to add Enrolled Properties to this CI when the Participants did not acquire parcels from an existing Participant. When one Participant seeks to add Enrolled Properties received via transfer from another Participant, the Participant must follow the procedures outlined in section B, above. This section also addresses Participants' ability to remove Enrolled Properties from this CI.

1. Addition and Removal of Enrolled Properties by All Activities Participants.

Participants that enrolled via the All Activities method may add Enrolled Properties to (and remove Enrolled Properties from) this CI at any time, including after any decision to list a Covered Species. Participants will provide an updated GIS shapefile of Enrolled Properties reflecting additions or removals as part of the next annual update to the Commissioner as described in Section A.

2. Additions to Enrolled Properties by Parcel-by-Parcel Participants.

Participants that enrolled via the Parcel-by-Parcel method may add parcels to their lists of Enrolled Property prior to any decision to list a Covered Species. After any decision to list a Covered Species, Participants that enrolled via the Parcel-by-Parcel method cannot add parcels to their lists of Enrolled Property. Additionally, Participants that enrolled via the Parcel-by-Parcel method and are required to pay enrollment fees cannot remove parcels from their list of Enrolled Property until three years of Enrollment Fees are paid for the parcel.

If the Service in the future develops a policy allowing enrollment of new parcels in a CCAA after listing, it will consider whether to propose an amendment to this CCAA that would allow this CI to be amended to enroll additional property after listing, consistent with any potential criteria that may be developed if the Service allows post-listing additions in the future. For example, if one of the Covered Species is considered listed as "threatened" or "endangered" by the Service due to publication of the listing decision in the Federal Register, but due to unforeseen circumstances the species has no legal protection, enrollment of properties may be allowed until the Service publishes a status clarification in the Federal Register.

3. Replacement of Enrolled Properties by Parcel-by-Parcel Participants.

The limitations on the addition of parcels to or removal of parcels from lists of Enrolled Property by Participants that enrolled via the Parcel-by-Parcel method described above do not apply when a Participant replaces a parcel of Enrolled Property with an unenrolled parcel. Participants that enrolled via the Parcel-by-Parcel method may amend this CI to replace a parcel of Enrolled Property with an unenrolled parcel of equal or less acreage before or after a listing decision ("Replacement of Enrolled Properties"). Replacement of Enrolled Properties cannot increase the total number of acres of Enrolled Property described in this CI. Once a Covered Activity results in New Surface Disturbance on an Enrolled Property, the entire Enrolled Property (i.e., the entire parcel) cannot be replaced with an unenrolled parcel.

All Replacements of Enrolled Properties must be approved by the Service and the Commissioner. The Participant must provide written notification of the intent to replace any Enrolled Properties to the Commissioner not less than 30 days prior to the replacement. The notification will include a GIS shapefile and a spreadsheet with the lease number(s), detailed legal description(s), and acreage of the parcel(s) involved.

D. Enrollment Fees and Habitat Conservation Fees

[INSERT SCHEDULE OF FEES, IF APPLICABLE]

E. In-Kind Contributions

[INSERT IN-KIND CONTRIBUTIONS, IF APPLICABLE]

II. PARTICIPANT AGREEMENT TO IMPLEMENT CONSERVATION MEASURES.

The Participant agrees to implement the following Conservation Measures to avoid and minimize impacts to Covered Species:

[INSERT CONSERVATION MEASURES]

VI. SUSPENSION AND TERMINATION.

A. Suspension.

The Participant agrees that the Commissioner, in coordination with CEHMM and the Service, can suspend any CI as it relates to some or all of the Enrolled Property identified in Exhibit A of the CI until the Habitat Conservation Fee or Enrollment Fee (if any) associated with the CI is paid. Regardless of enrollment method, the CI may be suspended with respect to a single parcel of Enrolled Property. The Service would not authorize incidental take of Covered Species resulting from any activities occurring on Enrolled Property for which the CI is suspended.

B. Voluntary Termination.

The Participant may terminate this CI by giving thirty (30) days written notice to the Commissioner and Service as to any or all of the Enrolled Property.

C. Involuntary Termination.

A CI may only be involuntarily terminated because of a Participant's failure to implement the Conservation Measures documented in this CI. If the Commissioner or the Service determines that a Lessee is failing to implement the Conservation Measures agreed to in the CI, the Commissioner shall notify the Lessee by mail and email of the nature of the violation and the corrective actions that are required. The Lessee shall complete corrective actions within sixty days of receipt of the first notification, or within fifteen days of receipt of the first notification, provide an explanation for why corrective actions cannot be completed within sixty days and an anticipated completion date. If corrective actions have not been completed within sixty days of receipt of the first notice or by a date specified by the Commissioner, the Commissioner shall provide a second notice of violation to the Lessee by mail and email. If the Lessee has not completed corrective actions within thirty days

of receipt of the second notice, the Commissioner may issue the Lessee a Conservation Measure Violation (CMV) by email and U.S. mail with proof of delivery.

A Lessee that receives a CMV can request Executive Committee review by notifying the Commissioner by email, fax, U.S. mail, or in person within 30 days of receipt of the CMV. The Executive Committee shall review the facts surrounding the issuance of the CMV and determine the outcome within 60 days of receiving the request for review from the Lessee, and will notify the Lessee by email and U.S. mail with proof of delivery within 10 days of a determination. If a Lessee acquires a total of three unresolved CMVs under any of the candidate conservation agreements for the Covered Species in which the Lessee is enrolled, the Commissioner may take actions, up to and including termination of some or all of the CI. Termination of all or a portion of a CI by the Commissioner shall constitute an agency determination as defined in Section 19.2.15.7.A. NMAC.

In the case of Lessee noncompliance with Conservation Measures that presents and immediate or severe threat to any of the Covered Species, the Commissioner shall request the Lessee to correct the noncompliance immediately or within a specified period of time that is reasonable under the circumstances. Failure of the Lessee to correct the noncompliance within the specified time will be deemed an unresolved CMV, subject to the Executive Committee review process described above.

VII. PROPERTY ACCESS.

The Participant agrees to provide access to Enrolled Property to the Commissioner and the Service with reasonable prior notice.

VIII. NO WAIVER.

The Participant, by entering into this CI, does not concede its agreement with, or endorsement of, any underlying studies and conclusions in the CCAA. Further, the Participant does not waive any legal rights or remedies that may exist outside of this CI.

IX. RELEASE.

If at any time any administrative or legal challenge prevents the implementation of this CI, the Participant agrees to release the United States Department of the Interior, the Service, and the Commissioner from any legal claims related to and against all other Parties to this CI and CCAA, and the Participant shall be excused from its performance. If at any time any administrative or legal challenge to the CCAA prevents the implementation of this CI, the Commissioner agrees to release the Participant from any legal claims related to this CI and CCAA.

X. AMENDMENT.

Any changes to the CCAA in effect at the time the Participant executes this CI may only be applied to the Participant upon its written consent. This CI may be amended with the written consent of each of the Parties hereto. The Parties agree to process requests for amendments in a timely manner. This CI may also be amended to accommodate changes to applicable legal requirements, including but not limited to the ESA, the NEPA, and the Service's permit regulations at 50 CFR 13 and 50 CFR 17.

XI. MULTIPLE ORIGINALS.

The Participant will sign three original copies of the CI, which will then be signed by the Service and the Commissioner. The date of the last signature will be the effective date of the CI. The Commissioner will mail one original CI to the Participant, one original to the Service, and will keep one original. Electronic signatures will suffice for enrollment requirements. If electronic signatures are used, one copy of the CI will suffice, and each signatory will receive a copy of the electronic version.

XIII. NOTICE.

Any notice permitted or required by this CI shall be transmitted within any time limits described in this CI to the persons set forth below or shall be deemed given five (5) days after deposit in the United States mail, certified and postage prepaid, return receipt requested, and addressed as follows or at such other address as any Party may from time to time specify to the other Parties in writing.

EXHIBIT C
CCAA

Appendix F: Enrollment Fees and Habitat Conservation Fees (adapted from CEHMM CCA/A)

Pursuant to an MOA between the Commissioner and CEHMM, enrollment and habitat conservation fees contributed by Participating Lessee will be managed by CEHMM and will be used to implement Habitat Projects on state trust lands to benefit the Covered Species. The locations for Habitat Projects will be selected based on their benefit to the Covered Species.

Enrollment Fees

Except as otherwise provided in the CI for certain types of Participants such as grazing lessees, or if In-Kind Contributions will be provided in lieu of Enrollment Fees, each Participant will be responsible for paying an Enrollment Fee for the first three years of enrollment. If the Participant opts out of the CCAA before the end of three years, the Participant is still responsible for three years of Enrollment Fees. The Participant may choose from two enrollment options: All Activities or Parcel-by-Parcel. For the purpose of administration of the CCAA and CIs, the preferred method of enrollment is All Activities Enrollment.

If the Participant chooses the All Activities enrollment, the Participant shall pay an Enrollment Fee of \$30,000 per year for each of the first three years of enrollment. This Enrollment Fee will cover enrollment of the Participant's land, including all activities and facilities, within the Covered Area. If the Participant chooses the Parcel-by-Parcel enrollment, the Participant shall pay a base Enrollment Fee of \$6,000 per year for each of the first three years of enrollment, and any additional per acre charge in accordance with the fee structure below. The Participant shall make the first payment of Enrollment Fees at the time of enrollment. The Participant shall pay the second and third Enrollment Fees on the first and second anniversaries of the CI effective date. If the Participant so chooses, the Participant may pay all three yearly Enrollment Fees at the time of enrollment. Enrollment Fees will not be required after the initial three-year period. CEHMM will maintain Participants Enrollment Fees in a habitat conservation fund specific to this CCAA and the Participant.

Habitat Conservation Fees

Unless the Participant elects to contribute in-kind services, Participants may be required to pay Habitat Conservation Fees associated with New Surface Disturbances and seismic activities in accordance with the fee schedule below. The Commissioner and CEHMM will calculate Habitat Conservation Fees based on the fee schedule and will maintain Habitat Conservation Fees in an account specific to this CCAA and the Participant's CI. CEHMM will deduct Habitat Conservation Fees from the Participant's account within 30 days of receiving the 15-Day Notice of a New Surface Disturbance. CEHMM will then provide notice, both written and by electronic transmission, to the Participant within 30 days of deducting Habitat Conservation Fees from the Participants account. This notice shall include the amount of fee deducted and the remaining balance in the Participant's account. Additional Habitat Conservation Fees would not need to be paid until Enrollment Fees and any prepaid Habitat Conservation Fees are exhausted from the habitat conservation fund. Participant may prepay more than the minimum Habitat Conservation Fees at any time at their

discretion; however, prepaid funds will not satisfy the need for annual Enrollment Fees. After the initial three-year period, each Participant must still pay Habitat Conservation Fees for new surface disturbing activities in accordance with the fee structure.

Conducting New Surface Disturbance is at the discretion of the Participant. The Participant may elect not to conduct surface disturbing activities after the Habitat Conservation Fees have been deducted. The Participant shall provide notice to CEHMM if the proposed disturbance has been cancelled, as described above. Any New Surface Disturbance or seismic activities would reinstate the need for a 15-Day Notice to CEHMM. Within 10 days of receiving notification of cancelled New Surface Disturbance or seismic activities from the Participant, CEHMM will refund the associated Habitat Conservation Fee to the Participant's account.

The Participant may be responsible for paying an Enrollment Fee for the first three years this CCAA and CI are in effect. If the Participant opts out of the CCAA, the Participant is still responsible for these fees. The Participant shall pay the \$30,000 annual Enrollment Fee for each of the first three years for enrollment of facilities existing within the Covered Area if enrolling by the All Activities method of enrollment. The Participant may choose to enroll via the Parcel-by-Parcel method. In this case, the Participant shall pay a minimum Enrollment Fee of \$6,000 for up to 2,000 acres. For all acreage above 2,000 acres, the Participant shall pay \$3/acre. For either method of enrollment, the Participant shall make the first payment of Enrollment Fees at the time of enrollment. The Participant shall pay the second and third on the first and second anniversaries of the CCAA effective date. If the Participant so chooses, the Participant may pay all three Enrollment Fees at the time of enrollment. Enrollment Fees will not be required after the initial three-year period.

Habitat Conservation Fee Schedule

The Habitat Conservation Fee for New Surface Disturbance associated with oil and gas development activities will be calculated using the following scales. The scales also apply to third parties doing work for the Participant either on or off the Participant's Enrolled Property, regardless of who constructs or operates the associated facilities. The Participant may prepay Habitat Conservation Fees at any time at their discretion. The Participant must notify the Commissioner prior to conducting any surface disturbing activities associated with this CI on or off the Enrolled Property either by the Participant or third-party subcontractors. Management zone of the New Surface Disturbance is determined by the location of the activity being developed, not actual habitat found on site.

All Habitat Conservation Fees will be adjusted once yearly by CEHMM to account for inflation or deflation. The term "Base Habitat Conservation Fee" shall refer to the values of the Habitat Conservation Fees set forth in this Exhibit. For purposes of this section, the term "CPI-U" shall refer to the Consumer Price Index for All Urban Consumers, U.S. City Average, all items less food and energy (base 1982-84=100), not seasonally adjusted, as published by the U.S. Department of Labor, Bureau of Labor Statistics. The Maximum Annual Inflation Increase shall be based on the percent increase between the annual average CPI-U for the calendar year that precedes the date of

the adjustment (“Current CPI-U”) and the annual average CPI-U for calendar year 2016 (“Base CPI-U”). The Maximum Annual Inflation Increase shall be calculated as follows:

$$\text{Maximum Annual Inflation Increase} = \text{Base Habitat Conservation Fee} \times ((\text{Current CPI-U} - \text{Base CPI-U}) / \text{Base CPI-U})$$

Increases, if any, shall occur on the January release date of the CPI-U. The Maximum Annual Inflation Increase will reflect the most recent revision to the annual average Current CPI-U, if any. The Commissioner will send Participants a notification, both electronically and by mail, each year at the time the fees are adjusted.

If the annual average CPI-U is unavailable for a calendar year, no increases will be made. If the CPI-U is discontinued entirely or unavailable for a period longer than two calendar years, the Permit Holder will consult with the Participant to select an appropriate alternative index.

1) New Well Location Fees¹

<u>Management Zone</u>	<u>Conservation Fee</u>
Zone A	Not applicable
Zone B	\$20,000/location
Zone C	\$10,000/location
Zone D	\$ 2,500/location

¹ Includes well pad no larger than 3 acres and associated access road not to exceed 1 acre. Anything larger will be considered New Surface Development Fees described below. If any portion of the project falls into a higher management zone, the charge incurred will be that of the higher management zone.

2) New Surface Development Fees

For other New Surface Disturbances associated with Enrolled Property, but not directly attributable to a new well pad² and associated road, including but not limited to pipelines, frac ponds, electric lines, pits, etc. the Habitat Conservation Fee will be based on the following scale:

<u>Management Zone</u>	<u>Conservation Fee³</u>
Zone A	Not applicable
Zone B	\$7,500/acre
Zone C	\$2,500/acre
Zone D	\$1,000/acre

² Co-located wells that require an increase in the size of the existing pad will be assessed by new acres disturbed.

³ These Conservation Fees are based on the following figures. No additional amounts are owed beyond the amount of the Conservation Fees:

Lease of Water Rights	10 acre feet = \$5,000-\$10,000
Purchase of Water Rights	1 acre foot = \$5,500-\$10,000
Habitat Restoration (ie, salt cedar treatment)	4 acres = \$10,000
Caliche Removal	2-3 acres = \$10,000
Reseeding	1 acre = \$1,000
Rebuilding Water Crossings	Undeterminable at this time

Note: All acreage calculations will be rounded up to the next whole acre, if over 0.5 acres.

New operations on previously disturbed land (e.g., co-located new well on an existing pad or new pipeline in an existing corridor, etc.) will incur no additional Habitat Conservation Fee, unless the area to be redisturbed has been reseeded and/or reclaimed as part of reclamation. Fees will also be assessed for any new acreage disturbed.

The Commissioner will calculate area of New Surface Disturbances based on information received and/or on-the-ground observation. Should the Participant disagree with the Commissioner’s calculation of the area of New Surface Disturbance, the Participant has the right to challenge the estimate, provide supporting data, and meet with the Commissioner and/or the Service, if necessary. The Commissioner and the Service, if participating, will have the responsibility for the final determination of the area of New Surface Disturbance.

The Habitat Conservation Fee for above-ground powerlines will be calculated using the above scale for New Surface Development. The acreage of New Surface Disturbance will be based on information found in the OCD and State Land Office New Surface Disturbance activities approval document.

If New Surface Disturbance falls within two or more management zones, the amount of the Habitat Conservation Fee will reflect the amount of the New Surface Disturbance within each management zone.

3) Fees associated with new seismic data acquisition

<u>Management Zone</u>	<u>3D Survey Conservation Fee</u>	<u>2D Survey Conservation Fee</u>
Zone A	\$10.00/acre	\$200.00/linear mile*
Zone B	\$ 7.50/acre	\$150.00/linear mile*

Zone C	\$ 5.00/acre	\$100.00/linear mile*
Zone D	\$ 1.50/acre	\$ 25.00/linear mile*

*or any fraction thereof

The acquisition of seismic data on enrolled parcels may also disturb the surface of other land not enrolled in this CI. The Habitat Conservation Fee calculated for seismic activity includes disturbances occurring on both enrolled and non-enrolled land.

Routine production operations

Routine production operations are not considered New Surface Disturbance and will not create the obligations to pay a Habitat Conservation Fee. Routine production operations are those that do not require an agency permit or approval, and those operations that require an agency approval but do not disturb the surface.
